

0 / Endpoint Management

Endpoint Management Software - IBM MaaS360

Role for mobile endpoint security
Protect all devices

Overview

Remote workforce

Risk based application
patching

Application
management

Data management

Safe access

Next steps

Manage your endpoint management from a single console

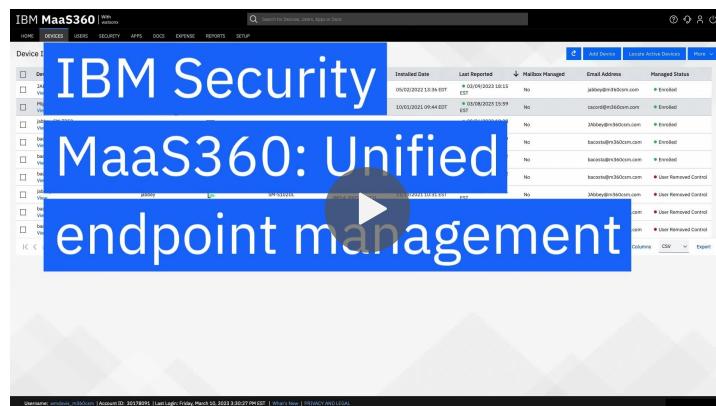

Flexible work models are the new norm.
With endpoint management, IT
administrators can:

- Quickly enroll and configure devices
- Manage cybersecurity
- Automate and integrate third party
apps

IBM MaaS360: Unified endpoint management (1:40 min)

View the webinar: Understanding and avoiding mobile blind spots

Learn about mobile blind spots that organizations often miss—yet attackers rarely do.

[Watch it now](#)

Remote workforce

Android, iOS, Windows and iPadOS management

Whether you're supporting iOS, Android, Windows, macOS, Chrome OS or ruggedized devices, easily manage and protect your on-premises and remote corporate-owned and personal laptops, desktops, modern devices and more—all from a single console.

The screenshot shows the IBM Security MaaS360 with Watson interface. The top navigation bar includes HOME, DEVICES, USERS, SECURITY, APPS, DOCS, EXPENSE, SCHOOLS, REPORTS, and SETUP. The left sidebar has sections for DEVICES, USERS, SECURITY, APPS, DOCS, EXPENSE, SCHOOLS, and REPORTS. The main area displays the 'My Alert Center' with a summary of device status: 0 jailbroken or rooted, 0 roaming, 13 total device count, 0 device hotspot on, 1 encryption status, 0 high data usage, and 0 enrolled devices (Last 7 Days). Below this is the 'My Advisor' section with two risk exposure alerts: one for missing November 2022 Apple iOS 16.1.1 & iPadOS 16.1.1 updates and another for missing October 2022 update for Apple iOS 16.1 and iPadOS 16.1. The right sidebar shows 'Devices' (13) and 'Users' (51) counts, and the 'My Activity Feed' which lists recent events like new devices, active alerts, and policy publications.

Manage mobile devices

Support corporate email and apps with advanced Android iOS and iPadOS mobile endpoint management features. Perform immediate enrollments, patch management and remote troubleshooting, while controlling mobile expenses.

**Integrate with Microsoft**

Manage and integrate your Microsoft ecosystem with your technology stack to enable distribution, control access and apply policies.

Risk based application patching

Discover vulnerable apps and automatically patch them based on critical levels

Streamline endpoint security and management and stay productive with intelligent patch prioritization for proactive threat mitigation for Windows and macOS with IBM MaaS360 with Risk Based Application Patching.

Windows Malicious Software Removal Tool x64 - v5.111 (KB90830)	RollUp	Windows 11	
Security Intelligence Update for Microsoft Defender Antivirus - KB2267602 (Version 1.393.995.0)	Unknown	Microsoft Defender Antivirus	
2023-04 Update for Windows 11 Version 22H2 for x64-based Systems (KB4023057)			

Get visibility

View the 3rd party applications installed and continuously identify and report 3rd party application vulnerabilities, including overall risk to the organization.

Get remediation

Automate application updates and prioritize deployment based on risk information, using the power of AI. Keep audit trail and track remediation progress.

Quick analytics

Update 3rd party applications both on, or off network and automatically score your devices and organization based on CVE and CVSS information.

Application management

Add apps, control access and check update status all on one screen

Control, deploy, track and configure mobile apps remotely on personal and corporate devices while maintaining a robust security posture.

Data management

Create secure mail, browser, workplace app container and usage policies

Enable users to access, create, edit and sync documents on their devices. Managed documents can be version controlled, audited and secured through data loss prevention (DLP).
