

# Workspace ONE Admin Assistant for macOS Release Notes

Last Updated May 15, 2025 | 4 minute read

Summarize

Omnissa Workspace ONE Admin Assistant

Release Notes

## What's in the Release Notes

Omnissa Workspace ONE Admin Assistant for macOS Release Notes describe the new features and enhancements in each release. This page contains a summary of the new capabilities, issues that have been resolved, and known issues that have been reported in each version.

### : Urgent Notification regarding legacy Domain End of Service

As part of the migration from legacy VMware owned domains to Omnissa owned domains, customers' network and security teams must make firewall changes to allow access to the new Omnissa owned domains by June 15th, 2025, to prepare and not block the new Omnissa domain network requests in upcoming product and service updates. This also impacts any API driven tasks or automation tasks created. Please see [KB6000840](#) for more information.

## Workspace ONE Admin Assistant 24.11 for macOS

## New Features

### New features for this release include:

In this release, we have updated the code for Munki, Swift, and Open SSL to ensure that our product is up-to-date with the latest technologies and security standards. These updates will improve the performance and stability of Admin Assistant and make it even more reliable for our users.

We are introducing a new versioning format for Admin Assistant that reflects the month and year of release. This new format will make it easier to keep track of which version you're using and help ensure that you're always running the latest and greatest version of Admin Assistant.

## Minimum Requirements

### Following are the minimum requirements:

- macOS 10.14 or later
- Workspace ONE UEM Console 2109.

## Download Instructions

### How to Download Workspace ONE Admin Assistant 23.03 for macOS

- **Prior Version is Installed:** On the next launch, the application will detect an update is available and proceed to install it
